DevOps and Web3 Engineer from IIT Madras specializing in cloud infrastructure, blockchain systems, and production-grade DevOps automation. Proven track record in scaling SCA-regulated fintech systems, building developer infrastructure, and evaluating web3 protocols.

Experience

Valura.AI (SCA Regulated Fintech)

Remote

Infrastructure Lead

May 2025 – December 2025

- Architected and operated a production-grade AWS infrastructure using **ECS, EC2, VPC segmentation, and Application Load Balancers**, enabling **99%** service availability with instance rightsizing, automated database backups, resilient service routing, and fully isolated environments for development, testing, and production workloads.
- Designed and implemented **end-to-end CI/CD pipelines using GitHub Actions** with Blacksmith and custom self-hosted runners integrating automated linting, type checks, container builds, and vulnerability scanning, reducing deployment time by **90%** and enabling **safe daily production releases**.
- **Provisioned and deployed an enterprise-grade HPE bare-metal server** from the ground up, configuring networking, virtualization stack, and monitoring, while coordinating with a co-location provider for secure hosting and reliable connectivity.
- Architected and maintained an internal infrastructure lab using **Proxmox**, managing a cluster of **20+ Linux and Windows VMs** for testing, and deploying internal applications and financial strategies in a controlled environment.
- **Strengthened network security by deploying OPNsense**, managing granular firewall rules, and configuring secure VPN access (WireGuard) for remote developers interacting with internal trading algorithms and services.
- Led infrastructure and security compliance efforts for **SCA Category 5** (licensed), VARA licensing, and ISO 27001 in Dubai.
- **Spearheaded product design and development lifecycle**, prioritizing feature roadmaps, architecting technical implementation plans, and coordinating teams to ensure timely delivery using weekly sprints.
- Administered enterprise SaaS and developer infrastructure with strict RBAC, managing **Microsoft 365 licenses, GitHub organization**, and corporate subscriptions like AI compute credits.

2Cents Capital (Hedge Fund)

Bangalore, India

Crypto Analyst

Aug 2024 – December 2025

- Conducted technical and economic **audits on emerging web3 protocols and ICO/IDO projects**, reviewing smart contract codebases, tokenomics models, team structure, and fundraising, to identify vulnerabilities before investment.
- Built an **automated pipeline to allocate stablecoin yields** across various native staking, lending, and liquidity pools, scoring opportunities based on network, protocol, and coin inputs.
- Deployed **Solana-based arbitrage trading bot (notarb)**, optimizing high-frequency transaction execution logic to capture on-chain price discrepancies.
- **Directed a 4-member crypto analytics team**, defining sprint goals, managing task delegation, and ensuring timely execution.

Saarang, IIT Madras

Chennai, India

DevOps Developer & eSports Convenor

July 2021 – May 2023

- Managed infrastructure and **DevOps workflows** for one of India's largest cultural festivals, ensuring zero downtime during the peak event, with 80,000+ visitors.
- Conducted offline/online competitions for various games like Valorant, FIFA, & BGMI with 500+ participants.

Projects

FluXtream.co | Crypto Streaming, Aptos blockchain

Aptos Winter School 2023, IIT Bombay

- Architected a **Crypto streaming platform on the Aptos blockchain**, enabling users to stream tokens to recipients over time through programmable payment flows, developing both the smart contracts and full-stack application.
- Deployed smart contracts and web infrastructure for the initial 50+ beta users.

NFTRokz | Lending and Borrowing platform, Starknet blockchain

Starknet Hackathon 2022, Bengaluru

- Built an **NFT-collateralized lending and borrowing platform on Starknet**, allowing users to unlock liquidity from their NFT holdings through smart contract-based lending mechanisms.
- Engineered the frontend integration layer to ensure secure interaction between user wallets and deployed Starknet smart contracts.

Optimaz.me | Metaverse 3D Game, Vue.js, Optimism blockchain

Finalist, Metaverse Hackathon by Encode, Online

- Developed a **token-gated 3D metaverse game** with Vue.js, integrating blockchain-based access control for in-game assets.
- Implemented randomized spawning algorithms and dynamic UI interactions for maze navigation and asset minting.

Technical Skills

Cloud & Infrastructure: AWS (ECS, EC2, EKS, VPC, Cognito), Terraform, Proxmox, Bare-Metal, Docker, Kubernetes

DevOps & Security: CI/CD (GitHub Actions), Prometheus & Grafana, Linux Admin, Bash, WireGuard VPN, OPNsense

Web3 & Blockchain: Solidity, Rust, Move (Aptos), Cairo (Starknet), Foundry/Hardhat, Smart Contract Auditing, DeFi

Programming & Web: Python, TypeScript/JavaScript, SQL, Next.js, React.js, Tailwind CSS, Vue.js

Education

Indian Institute of Technology, Madras

Chennai, India

B.Tech in Naval Architecture and Ocean Engineering (CGPA: 7.86)

May 2020 – June 2024

Seoul National University

Seoul, South Korea

Semester Exchange (Computer Science, Credits: 64)

Feb 2023 – June 2023
