Infrastructure Developer and Crypto Analyst, IIT Madras Alumnus with experience in cloud computing, bare-metal servers, AI automation, smart contract development, and quantitative finance.

## Experience

### Infrastructure Lead

May 2025 – December 2025

2Cents Group – Valura.AI - Fintech(SCA) Startup

Remote / Bangalore, India

- Engineered production-grade **AWS infrastructure (ECS, EC2, ALB, S3, RDS, Cognito)** with completely isolated environments from the ground up, successfully scaling to support web and mobile applications for over **5000+ users (MAU)**.
- Achieved a **99.6% service availability (SLI)** with Multi-AZ deployment, targeted auto-scaling policies, and zero-downtime rolling updates.
- Designed **end-to-end CI/CD pipelines** using **GitHub Actions** with self-hosted runners, incorporating automated code checks, security checks (SAST & DAST), and vulnerability scanning (SCA), which successfully **reduced deployment time by 90%** for faster production releases.
- Provisioned and deployed an enterprise-grade **HPE bare-metal server**, directly coordinating with a co-location provider for secure hosting.
- Architected and deployed an internal private infrastructure using **Proxmox**, provisioning a **high-availability cluster** of Linux and Windows VMs with automated resources, dedicated to Synapse (an internal tool for trading) and various trading strategies.
- Implemented a firewall and networking having different zones on Proxmox with **OPNsense** and access through **Wireguard VPN**. Utilized LXC's / VMs with strict resource controls for testing and production with GitHub and **Portainer** for CI/CD deployment.
- Established strict RBAC controls for team members across GitHub, Microsoft, and internal servers to enforce the principle of least privilege.
- **Led infrastructure and security compliance efforts** required for securing **SCA Category 5** licensing and **ISO 27001** audit readiness.

### Crypto Analyst

August 2024 – May 2025

2Cents Group – 2Cents Capital - Hedge Fund Startup

Remote / Bangalore, India

- Conducted technical and economic **audits on emerging web3 protocols and ICO/IDO projects**, to identify viability prior to investment.
- Developed an **LLM-based classification engine** for ICO/IDO evaluation based on project vision, tokenomics, core team members, open source codebases, and community to identify potential investments, resulting in evaluation of **500+ ICO/IDOs**.
- Built an **automated pipeline for allocating stablecoin yields** across various native staking, lending, and liquidity pools, dynamically scoring real-time opportunities based on 30+ data indicators on network, protocol, and coin.
- Developed and deployed **10+ crypto trading strategies** on custom trading bots, with real funds and an accumulated **18.5% ROI in a year**.
- Deployed a **Solana-based arbitrage trading bot** (notarb), to capture on-chain price discrepancies with **12.6% ROI in 6 months**.
- Represented the fund internationally in Dubai, UAE, **pitching crypto investment strategies** to over 50 high-net-worth investors.
- **Directed a 4-member crypto analytics team**, managing tasks, and ensuring timely execution aligned to our goals.

## Projects

**Blockchain SRE & Infrastructure Lab** | AWS, Docker, Terraform, Prometheus, Grafana

Personal Project

- Developed an one-click **production Blockchain Node setup using Terraform** for Ethereum on **AWS**, with automated provisioning.
- Ready-to-use RPC and health monitoring, observability stack (Prometheus, Grafana), and automated alerting workflows with Alertmanager.

**NFTRokz** | Lending and Borrowing platform, Starknet blockchain

Starknet Hackathon 2022, Bengaluru

- Built a **NFT-collateralized lending and borrowing platform on Starknet**, allowing users to unlock liquidity from their NFT holdings through smart contract-based lending mechanisms, even from other NFTs on other blockchains.
- Engineered the frontend with secure interaction between user wallets and developed the Starknet smart contracts in Cairo language.

**FluXtream.co** | Full-Stack, Smart Contracts, Aptos Blockchain

Aptos Winter School 2023, IIT Bombay

- Coded a **Crypto streaming platform on the Aptos** blockchain, enabling users to stream tokens to recipients over time.
- Developed full-stack app and deployed it for beta for the **initial 50+ users**. Made it in a team of three people.

## Technical Skills

**Infrastructure:** AWS, GCP, Docker, Kubernetes, Terraform, Proxmox, Bare-Metal, Linux, GitOps, Jenkins, OPNsense, VPN

**Crypto:** Ethereum/EVM, Solana, Aptos, Smart Contracts (Solidity, Rust, Cairo), Node Services, Arweave

**Programming:** Python, Bash, TypeScript/JavaScript, Rust, Solidity, Next.js, React.js, Tailwind CSS, SQL

## Certifications

**FinTech Industry Professional (FTIP®), CFI** – May 2026

**Certified Kubernetes Administrator (CKA)** – Expected July 2026

**AWS Certified DevOps Engineer – Professional** – Expected August 2026

## Education

**Indian Institute of Technology, Madras**

*B.Tech in Naval Architecture and Ocean Engineering (CGPA: 7.86)*

Chennai, India

May 2020 – June 2024

**Seoul National University**

*Semester Exchange (Computer Science, Credits: 64)*

Seoul, South Korea

Feb 2023 – June 2023
